

What is claimed is:

1. An electronic data storage apparatus for storing electronic data, comprising:

5 key management means for managing an individual key unique to the electronic data storage apparatus to which said means belongs, and a common key shared with other electronic data storage apparatuses; and

10 encryption means for performing an encrypting process on electronic data stored in the electronic data storage apparatus to which said means belongs using the individual key, and performing an encrypting process using the common key or with data verification on electronic data transmitted to or received from another electronic data storage apparatus.

15

2. The apparatus according to claim 1, wherein said key management means manages a group key as the common key to be shared in a group of a plurality of electronic data storage apparatuses.

20

3. The apparatus according to claim 1, wherein:

a main electronic data storage apparatus exists in the group;

25 said encryption means of said main electronic

data storage apparatus generates an individual key of each electronic data storage apparatus in the group using an individual key of the apparatus to which said means belongs; and

5 said generated individual key is distributed to each electronic data storage apparatus belonging to the group.

4. The apparatus according to claim 2, wherein:

10 a main electronic data storage apparatus exists in the group;

 said encryption means of said main electronic data storage apparatus generates a group key to be shared in the group using an individual key of the apparatus to which said means belongs; and

15 said generated group key is distributed to each electronic data storage apparatus belonging to the group.

20 5. The apparatus according to claim 2, wherein:

 a main electronic data storage apparatus exists in the group;

 said encryption means of said main electronic data storage apparatus generates a group key to be shared in the group with a key preliminarily assigned

as the individual key to said main electronic data storage apparatus associated with a new key externally specified; and

5 said generated group key is distributed to each electronic data storage apparatus belonging to the group.

6. The apparatus according to claim 2, wherein:
10 a main electronic data storage apparatus exists in the group, and an electronic data storage and management apparatus for managing respective main electronic data storage apparatuses in a plurality of groups exists;

15 said encryption means of said electronic data storage and management apparatus generates an individual key of each of said main electronic data storage apparatuses using an individual key of the apparatus to which said means belongs; and

20 said generated individual key is distributed to each of said main electronic data storage apparatuses.

7. The apparatus according to claim 2, wherein
25 said key management means manages, in addition to said group key as the common key, a public key for use in transmitting electronic data to and receiving

it from an electronic data storage apparatus belonging to a group different from a group of the electronic data storage apparatus to which said means belongs.

- B*
- 5 8. The apparatus according to claim 1, wherein
 said individual key is preliminarily assigned to
 each electronic data storage apparatus before use of
 the apparatus.
- 10 9. The apparatus according to claim 1, wherein:
 said encryption means generates the individual
 key with a key preliminarily set before use of the
 apparatus to which said means belongs with a new
 externally specified key; and
 said key management means manages the generated
 individual key.
- 15 10. The apparatus according to claim 1, wherein
 said key management means manages, in addition
 to the individual key and the common key, a master key
 to be shared by all electronic data storage
 apparatuses.
- 20 11. The apparatus according to claim 10, wherein:
 said encryption means generates the individual

key by encrypting information identifying the apparatus to which said means belongs using the master key; and

5 said key management means manages the generated individual key.

12. The apparatus according to claim 11, wherein:

10 a main electronic data storage apparatus exists in a group of a plurality of electronic data storage apparatuses;

15 said encryption means of said main electronic data storage apparatus generates a group key as the common key by encrypting information identifying the group using the generated individual key; and

20 said generated group key is distributed to each electronic data storage apparatus belonging to the group.

13. The apparatus according to claim 1, wherein:

25 a hierarchical structure of electronic data storage apparatuses is designed as having a group of a plurality of electronic data storage apparatuses as one hierarchical level; and

25 said key management means manages a group key as the common key depending on a hierarchical level of

a group containing the electronic data storage apparatus to which said means belongs.

A2
10/14 5
14. The apparatus according to claim 13, wherein:
in the hierarchical structure of the electronic data storage apparatuses, an electronic data storage and management apparatus for managing electronic data storage apparatuses in a lower order group exists in a group at one level higher than the lower order group;

10
said encryption means of said electronic data storage and management apparatus generates a group key for the lower order group using the individual key of the apparatus to which said means belongs; and

15
said generated group key is distributed to the electronic data storage apparatuses in the group at one level lower.

20
15. A method of managing electronic data in an electronic data storage apparatus in a hierarchical structure having a group of a plurality of electronic data storage apparatuses as one hierarchical level, comprising the steps of:

- structure re-encrypting data, encrypted using an individual key which is unique to and stored in the apparatus, using a higher order group key corresponding to the hierarchical level, and transmitting the re-encrypted data to an electronic data storage and management apparatus for managing the electronic data storage apparatuses in a group at one hierarchical level lower;
- 10 said electronic data storage and management apparatus for managing a lower group of electronic data storage apparatuses verifying the received data using the higher order group key;
- 15 re-encrypting the electronic data using the lower order group key corresponding to one hierarchical level lower if the electronic data is correct as a result of the verification, and transmitting the data to a receiving electronic data storage apparatus in the group at one level lower;
- 20 said receiving electronic data storage apparatus verifying received data using the lower order group key; and
- 25 re-encrypting and storing received data using an individual key unique to the apparatus if the electronic data is correct as a result of the verification.

- 5 16. A method of managing electronic data in an electronic data storage apparatus in a hierarchical structure having a group of a plurality of electronic data storage apparatuses as one hierarchical level, comprising the steps of:
- 10 a transmitting electronic data storage apparatus in one hierarchical level of the hierarchical structure re-encrypting data, encrypted using an individual key which is unique to and stored in the apparatus, using a lower order group key corresponding to the hierarchical level, and transmitting the re-encrypted data to a lower order group electronic data storage and management apparatus for managing the electronic data storage apparatuses in the group;
- 15 said electronic data storage and management apparatus for managing a lower group of electronic data storage apparatuses verifying the received data using the lower order group key;
- 20 re-encrypting the electronic data using the higher order group key corresponding to one hierarchical level higher if the electronic data is correct as a result of the verification, and transmitting the data to a receiving electronic data storage apparatus in the group at one level higher;
- 25 said receiving electronic data storage apparatus

verifying received data using the higher order group key; and

re-encrypting and storing received data using an individual key unique to the apparatus if the electronic data is correct as a result of the verification.

17. A method of storing electronic data in an electronic data storage apparatus for storing the electronic data, comprising the steps of:

communicating electronic data using a common key shared with other electronic data storage apparatuses; and

15 performing an encrypting process using an individual key unique to an electronic data storage apparatus on data to be stored in the electronic data storage apparatus.

18. The method according to claim 17, wherein
20 said electronic data storage apparatus stores as the common key a group key shared in one group of a plurality of electronic data storage apparatuses;
a transmitting electronic data storage apparatus transmits electronic data after re-encrypting using
25 the group key the data stored in the apparatus and

- encrypted using the individual key;
- a receiving electronic data storage apparatus verifies the received electronic data using the group key; and
- 5 when the electronic data is correct according to a result of the verification, said electronic data is re-encrypted using the individual key and stored.
19. The method according to claim 17, wherein
- 10 said electronic data storage apparatus belonging to a group of electronic data storage apparatuses stores as the common key a public key of an electronic data storage apparatus belonging to another group of a plurality of electronic data storage apparatuses;
- 15 a transmitting electronic data storage apparatus transmits electronic data after re-encrypting using the public key the data stored in the apparatus and encrypted using the individual key;
- a receiving electronic data storage apparatus
- 20 verifies the received electronic data using a private key which is a pair to the public key; and
- when the electronic data is correct according to a result of the verification, said electronic data is re-encrypted using the individual key and stored.

20. A computer-readable storage medium used in an electronic data storage apparatus and storing a program to direct a computer to execute the steps of:
verifying stored electronic data using an
5 individual key unique to the electronic data storage
apparatus; and
transmitting the electronic data to a receiving
apparatus after re-encrypting the electronic data
using a common key shared with the receiving apparatus
10 when a result of the verification is correct.
21. A computer-readable storage medium used in an electronic data storage apparatus and storing a program to direct a computer to execute the steps of:
verifying externally received electronic data using a common key shared with a transmitting apparatus of the electronic data; and
re-encrypting the electronic data using an individual key unique to the electronic data storage
15 apparatus and storing the data when a result of the verification is correct.
